ModemServe™   Modem Server Software   Product Data Sheet

Modem Pooling for Windows Networks

ModemServe™ allows network users to access modems and other serial devices located on another PC on the network - just as if the modems or serial devices were connected to a local COM port on their computer.

This elegant software client/server solution eliminates the need to place costly phone lines and modems at every workstation on the network. ModemServe can simplify the administration of your network users and your dial-out equipment by centralizing your devices. ModemServe uses non-proprietary TCP/IP protocols, for optimum speed and maximum compatibility.

Easy to Install

ModemServe installation is straightforward and simple. Just install the ModemServe server software on any Windows XP/2003/2000/NT4 (Workstation or Server) PC with one or more modems attached, and select which COM ports you wish to be shared. Then load the client software on any PC that might want to use a modem. This creates one or several 'Virtual COM ports' on the client PC, which you can also attach modem drivers to if desired.

Simple to Use

Point any communications software to a Virtual COM Port and it communicates with one of the modems just as if it were attached directly to the client PC.
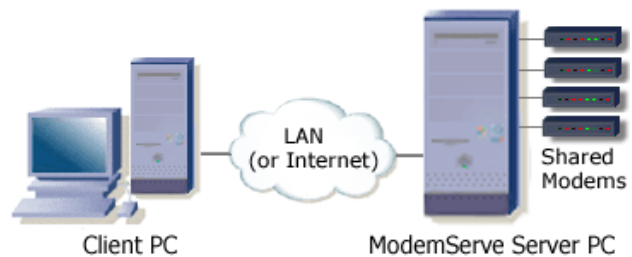

Wide Range of Applications

- Microsoft Dial-Up Networking.
- Fax applications (Class 2 or 2.0) including WinFax.
- Terminal Programs, including HyperTerminal.
- Remote Control applications, including pcAnywhere.
- Healthcare and Medical Billing software.
- Banking, Financial, and credit terminals.
- Retail POS terminals.

Benefits at a glance

- *Reduced costs*
  Enables everyone on the network to share existing modems and phone lines.
- *Complete utility*
  ModemServe includes the client software without any 'per user' charge.
- *Scalable*
  ModemServe supports 1 to 256 modems or other serial devices on a single PC.
- *Compatibility*
  NetModem is compatible with virtually all Windows based applications, as well as most DOS based applications.

Technical Features

- Supports 1 to 256 serial devices on a single PC.
- Compatible with MS-RAS for Dial-In.
- Supports Windows Small Business Server, Windows Terminal Server, and Citrix Metaframe.
- Supports multiple pools of Modems or COM ports.
- Each pool can require User Authentication or a password.
- Runs as a service, no need to login to Windows.
- Technical support included.

Requirements

- PC with Intel Pentium compatible processor.
- Windows XP/2003/2000/NT4 (Workstation or Server).
- One or more COM ports and/or Modems for sharing.
- Any TCP/IP LAN, WAN, or other Network.

Licensing

- Licensed per shared COM port, starting at $50 USD.
- Unlimited Clients included at no extra charge.
- Add additional ports as your needs increase.
